

An-ion based Personal Air Purifier - AIP-01

Size 1 - AIP-01

Carry this handy and low power consuming Air Purifier wherever you go!

How does it work?

Negative Ions (An-Ions) are a proven technology of several decades which are used for air purification.

It is proven scientifically that negative ions have a tendency to clear the air from:

- ◆ Airborne allergens(Pollen)
- ◆ Particulate matter
- ◆ Mold spores
- ◆ Bacteria
- ◆ Virus

The negative ions attach themselves to airborne particulate matter and negatively charge them. As a result, these viruses, bacteria, pollen, spores become too heavy and settle down and are prevented from entering our breathing passage and reduce our chance of becoming sick or getting infection from airborne viruses or bacteria!

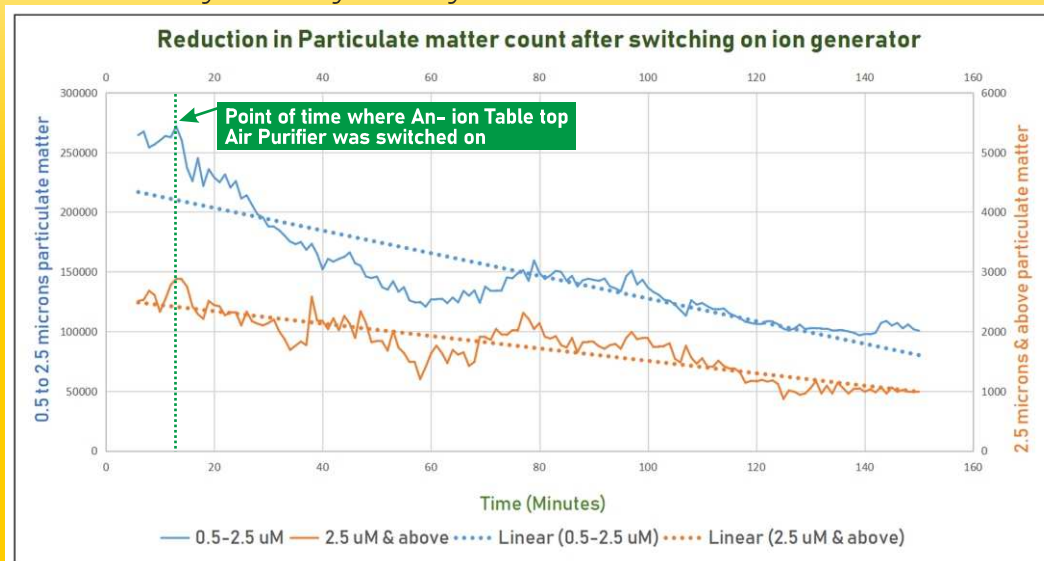

Over a period of time, entire surrounding air is cleaned by the negative ions!

The product is low power consuming and can be kept running 24X7 and 365 days!

- ◆ Carry with you!
- ◆ Negative Ion burst generated cleans Airborne particles, bacteria, microbes!
- ◆ Low Power Consumption!

Handy and easy to carry

Specifications

Part Number:
AIP-01

Power Supply:

Input:	230V AC
Power:	1 Watt

Dimensions:

Length:	120 mm
Breadth:	55 mm
Height:	80 mm

Working Principle:

Negative Ion Generation
